

Santa Rosa Junior College

Program Resource Planning Process

Biological Sciences 2024

1.1a Mission

Mission of Biological Sciences Department:

To provide students with an education in the biological sciences as preparation for college or university transfer, entrance into professional programs in the health sciences, general education, or general interest and lifelong learning. Faculty strive to provide a conceptual framework from which students will develop an appreciation and understanding of the unity and diversity of the earth's life forms.

1.1b Mission Alignment

Our mission aligns well with the mission statement of the college, developed through the strategic planning process. The Biological Sciences Department prepares students for transfer as biology majors, transfer to allied health programs, and we offer GE transfer level sciences classes both with and without a lab. We offer a developmental biology course to help students succeed in college level biology classes. We contribute to environmental stewardship by offering an ecology course that teaches the fundamental principles of ecology and "their application to problems of renewable resources, resource management, conservation, and global environmental issues".

Our department mission also aligns with the college's **Strategic Planning Goals**. We **support student success and foster learning and academic excellence** by hiring and mentoring outstanding faculty, offering rigorous and up-to-date curriculum, and by building relationships with a variety of organizations who provide internships to our students. We strive to **serve our diverse community** through our varied course offerings and by our outreach activities. We help to support **a strong culture of sustainability** with our curriculum. We **develop financial resources** through grant writing and robust enrollment in our courses. Our department members **improve institutional effectiveness** by serving on numerous committees, the academic senate, and AFA.

1.1c Description

We provide courses and instruction that serve three groups of students: those needing general biology or a laboratory science to transfer to a four-year institution, those preparing to transfer to four-year institutions as biology majors, and those intending to enter professional allied health programs. The department also offers two related courses that prepare students to be Pepperwood preserve stewards (BIO 85.1 & 85.2). One of our former goals was to offer courses for students who wish to study the natural world for personal enrichment, and in these troubled budget times, those kinds of courses have been inactivated. It is our hope that when budgets improve some of these courses will be reinstated.

1.1d Hours of Office Operation and Service by Location

The Biological Sciences Department is open (faculty are here, courses are being taught) during regular teaching hours: Monday through Friday, from 7:30 AM until 5 PM, and 10 PM on nights when there are night courses taught (MTWTh). This is true for both Santa Rosa and Petaluma campuses. The department office is in Santa Rosa and is staffed by an administrative assistant for 30 hours/week (currently unfilled) and a science lab coordinator (SLC), who works 40 hours/week. The AA works flexible hours, but generally aims to be here in the middle of the day. The SLC is here for a regular workday, but is often working in labs, not in the office.

The Petaluma Campus Biology program offers day and evening courses M-Th. The Coordinator of Science Labs has an office next to the biology labs and is present during operational hours, M-F, 8:30am-4:30pm.

1.2 Program/Unit Context and Environmental Scan

There have not been any major changes to transfer requirements for students majoring in the Biological Sciences. Our students are successful at four-year transfer schools and in allied health professional programs. It is important to note that many of our pre-allied health students have been accepted in a variety of schools, including Samuel Merritt University, USF, and John Hopkins. This is significant because there are limited seats available in the SRJC allied health programs, but our students are well aware of this and are successfully applying to many other schools. Our faculty are known for their academic expertise and rigor, their contributions to the department and the college, their devotion to helping students succeed. The department is also well known for our successful effort to establish a collegial and highly functioning department.

There has been a major trend in general education in the biological sciences. A set of recommendations has been published by the American Association for the Advancement of Science (AAAS). These recommendations encourage more problem solving and analytical work in biology lab courses, and less memorization. There is also a list of core concepts that all students leaving a biology course must be familiar with. A member of the department spent a sabbatical studying these changes in biological education and has presented several workshops for our faculty. We have begun to make changes to our courses applying these recommendations.

The Biological Sciences Department has developed partnerships with Bodega Marine Lab, Point Blue, Landpaths, Audubon Canyon Ranch, the Jewish Free Clinic and The Buck Institute for Research on Ageing to obtain paid and unpaid internship experiences for our biology majors.

2.1a Budget Needs

If you need additional funds, please explain.

Our budget for supplies and equipment has not increased for the past several years, yet the cost of supplies and required maintenance has. The Biological Sciences budget must cover a great deal of items beyond those typical to most academic departments, such as live cultures, consumable supplies for labs, and equipment maintenance. The lab exercises performed in our courses are necessary to cover the concepts of our approved curriculum, and many of these courses prepare students for transfer into either 4-year universities or allied health programs. In addition, as science is ever progressing, lab activities need to be updated periodically to provide relevant experiences for our students. As a department, we have cut meaningful lab activities from our curriculum in the name of financial prudence, yet still regularly run a deficit. This has negatively affected the quality of the education experience we provide our students. If the college cannot bring our budget in line with the rising costs, some difficult decisions need to be made about which high demand courses to cut, as we've already maximized all possible efficiency strategies.

Physiology, Anatomy, and Microbiology are the most expensive courses to teach per section, they are also the most impacted. For example, we increased the number of ANAT 1 sections from 13/year to 16/year. For that course alone, the added enrollment means more frequent microscope maintenance, more histology slides and lab materials, added workload for the SLIA, etc. This can't be sustained at our current budget. While cutting these courses would save some money in the short term, these kinds of cuts would also have the largest impact on transfer, certificate, and degree completion. In addition to decreasing completion in our own department, the loss of these courses would impact the number of students who complete Nursing and other Allied Health degrees, which are among the most numerous in the college.

5652: Contract maintenance

Requesting an increase of **\$5000.00**. This request would still leave us a few thousand dollars shy of our 2017 budget. The maintenance contracts for the water system and the autoclave increased by 4-5% in 23/24 and will increase by 14% next year. If we got \$1,200 increase each year, then we would have enough to cover some microscope maintenance. If we got \$2500 then four labs could have their scopes all done per year as well.

5690: Cadavers

Requesting increase of **\$3,500.00**

Cadaver prices continue to increase while our budget for this activity remains constant. The 23/24 budget was \$20,129 and expenditures exceeded \$23,000. Cadaver dissection is an integral part of our pre-allied health program. Eliminating summer ANAT 1 may be necessary if this budget items isn't increased.

4390: General supplies

Requesting increase of **\$10,000.00**

We are requesting that our supplies budget be returned to at least 2017 levels (a \$9000 increase). We are requesting more given the fact that inflation has raised the cost of most items we depend on for instruction. Consumable and live lab supplies are one of our largest annual expenses. The department utilizes numerous cost-saving measures, however due to cost increases over time (including shipping costs), it is difficult to replicate each year's purchasing so that we can provide the same lab experiences without an increase of funding. In addition, to train our students in modern biological techniques, we need to update our labs overtime. For example, adding biotechnology experiments.

5620: Field trips

Requesting increase of **\$500.00**

Field trips are an integral part of a biology curriculum. These funds are needed to pay for van mileage.

4510: Graphics

Requesting increase of **\$1,500.00**

Despite our effort to reduce hardcopies made (printing and copying) we still exceed our annual budget by over \$1000/year. This graphics budget directly impacts students as it is used to print lab exercises and instructions and lecture study materials.

2.1b Budget Requests

Rank	Location	SP	M	Amount	Brief Rationale
0001	Santa Rosa	01	01	\$5,000.00	These funds are for increased costs of maintenance contracts and supplies
0002	Santa Rosa	01	01	\$3,500.00	These funds will cover the ever-increasing cost of cadavers (5690).
0003	Santa Rosa	01	01	\$10,000.00	These funds are required to cover the cost of basic supplies (4390) for our lab classes
0004	Santa Rosa	01	01	\$500.00	Funding to cover the cost of field trips (5620), which are a part of laboratory curriculum. Funds cover the cost of mileage related to use of campus vans. Field trip locations each semester include Sonoma Mountain, Bodega Bay, Armstrong Redwood State Park, Safari West.
0005	Santa Rosa	01	01	\$1,500.00	These funds are for graphics (4510)
0006	Santa Rosa	01	01	\$10,000.00	Funds to support student employees

2.2a Current Classified Positions

Position	Hr/Wk	Mo/Yr	Job Duties
Administrative Assistant II	40.00	12.00	BioSci department office management, type evaluations, monitor budget, source and purchase equipment and services, update website, provide departmental orientation for new employees, prepare PAF's, enter curriculum into SIS database. NOTE: Admin also serves the E&SS department, Chemistry and Physics with these hours. 16 hours/week for BioSci.
Science Lab Coordinator; SR	40.00	12.00	manage budgets, coordinate purchases and preparations for 50 lab sections; maintain living organisms, order and receive supplies, maintain equipment, supervise student employees, work with SLIA's on BIO 10, Majors Bio, Physiology, Anatomy and all other Bio classes preparations. Attempts to fill the gap for the absence of a microbiology lab SLIA which requires working from 7 AM to 7 PM on some days. NOTE - These 40 hours also work with supplying the Ag department with plates and the Petaluma campus Bio Sci with live bacterial cultures.
Science Lab Coordinator, Petaluma	40.00	12.00	manage budgets, coordinate purchases and preparations for student labs; maintain living organisms, order and receive supplies, maintain equipment; work with SLIA on MICRO 60 and 5 preparations, and BIO 10 and 100 when needed. NOTE - these 40 hours also coordinate other science courses (and their budgets) using lab facilities at the Petaluma campus: chemistry, earth/space science, physics, wastewater chemistry, animal health, viticulture, etc.
SLIA Anatomy and Microbiology	40.00	11.00	prepare student labs: equipment, specimens, reagents; assist in lab instruction; assign, oversee, and score dissections; dispose of hazardous waste; order/maintain/dispose of cadavers.
SLIA Physiology and Introductory Biology	40.00	11.00	prepare student labs: equipment, specimens, reagents; assist in lab instruction; maintain and repair equipment; provide biohazard training and supervision for blood labs.
SLIA Bio Majors	40.00	11.00	prepare student labs: equipment, specimens, reagents; assist in lab instruction, gather botany specimens, maintain living cultures for labs
SLIA evening, Santa Rosa	19.00	10.00	prepare student labs: equipment, specimens, reagents; assist in lab instruction
SLIA Introductory Biology, Micro, Petaluma	27.50	12.00	prepare student labs: equipment, specimens, reagents; assist in lab instruction
	0.00	0.00	

2.2b Current Management/Confidential Positions

Position	Hr/Wk	Mo/Yr	Job Duties
Department Chair	22.00	11.00	manage department: budget, evaluations, program review, schedule, curriculum, hiring, department meetings and communication; Biological Sciences has a SR chair (.52) and a Petaluma co-chair (.02) = .54 FTE release time. This release time does not accurately reflect the time spent to do the job.

2.2c Current STNC/Student Worker Positions

Position	Hr/Wk	Mo/Yr	Job Duties
Student Lab Assistant (2)	20.00	12.00	20 hours split by 2 workers. Care for animals, wash dishes, prepare solutions, media, and cultures, clean labs and microscopes
Student Lab Assistant, Petaluma	8.00	12.00	Care for animals, wash dishes, prepare solutions and media, clean labs and microscopes

2.2d Adequacy and Effectiveness of Staffing

The Biological Sciences Department does not have adequate staffing to support our needs.

Rank 1: The single discipline that does not have a dedicated SLIA is Microbiology. Yet, these courses have the greatest safety concerns given the regular use of microorganisms, hazardous chemicals, and natural gas/fire. In class support for these microbiology courses is essential for us to continue to maintain the number of sections of Microbiology we currently offer on the Santa Rosa campus. We are requesting a 30-hour per week SLIA position dedicated to supporting Microbiology.

Rank 2: Increase hours for evening SLIA from 19 to 30 hours per week. This position assists with several different courses that are taught in the late afternoon and evening, including BIO, ANAT, MICRO, and PHYSIO. Additional time is needed to adequately perform all duties and allow for growth in the number of evening sections we can offer.

Rank 3: Increase hours for Santa Rosa Student Lab Assistants. Our student lab assistants take care of many tasks that are integral to our classes and are in no way cost effective to have SLIAs perform, such as cleaning and upkeep of lab equipment, care of living specimens, and organizing supplies. We regularly run short on hours and end up having higher paid staff performing these menial tasks.

Petaluma Campus:

Rank 1: Petaluma SLIA hours increased from 27.5 to 30 hours per week. Adding any additional classes (such as more microbiology) will not be possible without increased staff at this location.

Rank 2: Increase hours for Petaluma Student Lab Assistant. Our student lab assistant takes care of many tasks that are integral to our classes and are in no way cost effective to have our SLIAs perform, such as cleaning and upkeep of lab equipment, care of living specimens, and organizing supplies. We regularly run short on hours and end up having higher paid staff performing these menial tasks. In addition, our student workers are science students who move on with their education away from the Petaluma Campus. An increase from 8 to 12 hours per week would allow one experienced student, who is getting ready to move on, to work with and train an incoming student worker.

2.2e Classified, STNC, Management Staffing Requests

Rank	Location	SP	M	Current Title	Proposed Title	Type
0001	Santa Rosa	01	01	None	SLIA, Microbiology, 75%, 10-month	Classified
0002	Santa Rosa	01	01	SLIA, Evening, 19 hours/week	SLIA, evening, 30 hours per week	Classified

2.3a Current Contract Faculty Positions

Position	Description
Biological Sciences Instructor	intro bio, ecology, zoology, pepperwood field courses
Biological Sciences Instructor	intro bio, botany
Biological Sciences Instructor	intro bio
Biological Sciences Instructor	intro bio, cell biology, anatomy
Biological Sciences Instructor	physiology, anatomy
Biological Sciences Instructor	intro bio, microbiology
Biological Sciences Instructor	anatomy, tropical biology, human biology
Biological Sciences Instructor	cell biology, microbiology
Biological Sciences Instructor	intro bio, zoology, marine biology
Biological Sciences Instructor	anatomy, physiology
Biological Sciences Instructor	intro bio, botany, ecology
Biological Sciences Instructor	intro bio, cell bio
Biological Sciences Instructor	anatomy, physiology
Biological Sciences Instructor	Intro bio, botany, ecology
Biological Sciences Instructor	physiology, anatomy

2.3b Full-Time and Part-Time Ratios

Discipline	FTEF Reg	% Reg Load	FTEF Adj	% Adj Load	Description
Anatomy	4.5400	77.0000	1.3600	23.0000	We currently have a healthy balance of FT:PT teaching each of our ANAT courses.
Biology	5.8100	45.0000	7.0500	55.0000	We recently hired a new FT instructor to teach primarily BIO courses. This increased the FT:PT ratio, although it is still below 50%.
Botany	0.8000	100.0000	0.0000	0.0000	There are only two remaining Botany courses (we used to have 11). We recently hired a full-time faculty to anchor these courses.
Microbiology	2.2000	64.0000	1.2200	36.0000	We continue to struggle to staff sufficient MICRO sections, especially at night.
Physiology	1.2100	44.0000	1.5300	56.0000	The recent hiring of a full-time faculty qualified to teach Anatomy/Physiology has stabilized this ratio. A portion of the PT load here is overload assignments reflecting the difficulty of meeting 100% load exactly.

2.3c Faculty Within Retirement Range

All 15 full time faculty are listed in section 2.3a. According to data provided by the college 8 current faculty are under 50, 2 are 50-54 and 5 are 55+. These data include the 13 at Santa Rosa and 2 at Petaluma.

2.3d Analysis of Faculty Staffing Needs and Rationale to Support Requests

1. Our top priority is to add a full-time instructor to teach our general biology courses (BIO 10, BIO 16, and BIO 100), while also contributing to our Pre-allied health courses. Although we have added dedicated full-time faculty to anchor BIO 10 and anatomy/physiology, we continue to find ourselves struggling to find sufficient associate faculty to teach our microbiology, anatomy, and physiology courses, especially at night. Also, our FT:PT ratio is still below 50% in our general BIO courses.

2.3e Faculty Staffing Requests

Rank	Location	SP	M	Discipline	SLO Assessment Rationale
0001	Santa Rosa	02	01	Bio. Sciences: gen. bio + other discipline	Our top priority is to add a full-time instructor to teach our general biology courses (BIO 10, BIO 16, and BIO 100), while also contributing to our Pre-allied health courses. Although we have added dedicated full-time faculty to anchor BIO 10 and anatomy/physiology, we continue to find ourselves struggling to find sufficient associate faculty to teach our microbiology, anatomy, and physiology courses, especially at night. Also, our FT:PT ratio is still below 50% in our general BIO courses.

2.4b Rationale for Instructional and Non-Instructional Equipment, Technology, and Software

Millipore System: Our existing system is old and no longer will be supported.

Insect lights: will be used the zoology students for their insect collecting assignment

LED Grow lights: these are used for student experiments in BIO 16 and in Botany classes

HOBOS/Kestral Drops: These are used by students for experiments in the major's series.

Set of Botany Slides: This is to replace a decades old set of slides in the botany classes which are no longer functional

Zoology specimens: We currently have a large number of irreplaceable zoology specimens that are owned by a retired professor. We would like to purchase them so we don't lose them when he leaves the college.

Botany specimens: These live specimens will be used in BOTANY courses and BIO 2.3 to help introduce students to the diversity of regional flora.

Student laptops: We have 10 new laptops that are used by students in lab throughout the department. Often the demand for these exceeds our availability. Having 12 more will allow multiple courses to use these simultaneously.

Lab chairs: Over the past decade we have slowly replaced old, damaged lab stools throughout Baker Hall. Room 1830 (anatomy laboratory) is the only lab room still using the old lab chairs. Most of these are torn or defective and desperately needing to be replaced. We are requesting set of new lab stools, consistent with the replacements we have acquired over the past several years.

Dissecting microscopes: These will complete a full class set for the botany lab (1840). They are used in BIO 2.3 and BOTANY courses.

Models for Anatomy and Zoology: various models are being requested to support instruction for our anatomy (Pre-allied health) and zoology (Biology) courses.

Reference textbooks for labs: several lab courses use supplemental textbooks as references during lab. To minimize the cost to students, we are requesting a small classroom set that students can use during lab hours.

Examples: BIO2.2 - Integrated Principles of Zoology. Hickman et al.; BIO2.1 - Essential Cell Biology. Alberts et al.; Campbell Biology. Urry et al.; MICRO5 – Microbiology: An Introduction. Tortora et al.;

Scales for BIO 16 & BIO 2.3: There are not enough scales for groups of students to weigh materials simultaneously in BIO 2.3, this would help mitigate the bottleneck. BIO 16 does not have their own set of scales.

Rolling Whiteboard: This magnetic rolling whiteboard will be used in 1850, our prep and student workspace, and 1860 as an additional board due to the position of the projector screen.

Tissue culture incubator: This would allow BIO 2.1 to grow mammalian cell lines and other eukaryotic cells in the lab, providing many possible opportunities to do lab activities more closely tied to lecture content.

Biological safety cabinet: This would allow BIO 2.1 to work with mammalian cell lines and other eukaryotic cells in the lab, providing many possible opportunities to do lab activities more closely tied to lecture content.

Epifluorescence microscope: This would open up the possibility for various labs to use fluorescent dyes or fluorescently-labeled antibodies to stain specific structures in cells or microscopic organisms. It would be particularly enriching in BIO 2.1 and MICRO 5, but potentially other labs could use it as well.

Heavy-duty lab carts: These will be used to store and transport dissecting scopes between lab rooms. We currently do not have complete sets in all labs, so having dissecting scopes on carts would allow more efficient transport and sharing.

Ergonomic office desks: We are requesting sit/stand desks for 3 contract faculty offices.

Ponchos: Reusable, storable collection for rainy field trips. Field trips are an important aspect of our field biology courses. These will help enhance the experience for students.

Garden Gloves: Reusable collection for outside botany work. By providing these materials, students won't need to purchase their own.

Autoclavable bottles: Student research projects have been experiencing a lot of contamination from using our current centrifuge bottles, which cannot be autoclaved.

Clips: These clips would expand what students and staff can do with the shaking incubator that we purchased last semester. The clips allow shaking of large flasks to create large volumes of culture, making preparation of competent cells much more efficient. Can also be used in student independent projects.

Dibbles: Used for outplanting in Botany courses and restoration projects.

Vegetation tools: Used for native garden stewardship by classes and volunteer workdays.

Hand lenses: For students to use for plant / insect ID and field journaling. Reduces the direct cost to students.

Binoculars: For student observations and field journaling. These field experiences expose students to careers in field biology.

Zoology field guides: Species ID references for field journals and student research projects.

2.4c Instructional Equipment Requests

Rank	Location	SP	M	Item Description	Qty	Cost Each	Total Cost	Requestor	Room/Space	Contact
0001	Santa Rosa	01	01	Student laptops	12	\$1,500.00	\$18,000.00	Tony Graziani	Baker	Tony Graziani

2.5a Minor Facilities Requests

Rank	Location	SP	M	Time Frame	Building	Room Number	Est. Cost	Description
0001	Santa Rosa	04	08	Urgent	Baker	1805/1807	\$2,000.00	Add electrical outlets in 1807 and in the island in 1805
0002	Santa Rosa	01	01	Urgent	Baker	1801/1809	\$1,000.00	install power outlets accessible from seats
0003	Santa Rosa	01	01	Urgent	Baker	1830	\$11,000.00	Video monitor
0004	Santa Rosa	01	02	Urgent	Lark	Greenhouse Courtyard	\$10,000.00	Install shadehouse in existing courtyard for native plant propagation
0005	Santa Rosa	01	01	Urgent	Baker	1801/1809	\$5,000.00	New Chalkboards
0006	Santa Rosa	04	08	Urgent	Baker	1805	\$20,000.00	Replace windows with non-tinted windows that can be secured from within
0007	Santa Rosa	04	03	Urgent	Baker	various	\$25,000.00	blinds for windows in 7 classrooms
0008	Santa Rosa	04	07	Urgent	Baker	1885A	\$2,000.00	Reposition the sink on the west side of 1885A to fix ergonomic issues
0009	Santa Rosa	01	01	Urgent	Baker	1829	\$200.00	Add light switch near the door that opens into 1837
0010	Santa Rosa	04	07	1 Year	Baker	1840, 1849, 1869, 1879	\$500.00	Dimmer Switches at instructor stations
0011	Santa Rosa	01	01	1 Year	Baker	external	\$0.00	Fix pocket doors into 1850 from all 4 offices
0012	Santa Rosa	04	07	2-3 Yr	Baker	1850	\$0.00	Install dermestid beetle box

2.5b Analysis of Existing Facilities

Baker Hall Critical Needs Prioritization List

- **Shadehouse in Lark Greenhouse:** We would like to update the existing shade structure in the Lark greenhouse courtyard. This space is vacant and this update will help expand our Botany curriculum and campus biodiversity work.
- **Windows in Baker 1805:** All of the windows are tinted. Also, the bottom windows are slatted and cannot be secured. We are requesting new windows that are not tinted and are either fixed or can be locked from inside if functional. We have specimens on display that we would like to protect while also being viewable from the exterior corridor.
- **Classroom shades:** Seven rooms have outdated and poorly functioning horizontal pull drapes. All are difficult to operate and knock over items on counters. One set is extremely stained. The purchase and installation of 22 high pull shades and 18 larger pull shades would darken rooms better and improve the function and professional appearance of these seven well-used labs.
- **Chalkboards for 1801/1809.** The current chalkboards in these rooms are virtually unreadable by students and need to be replaced immediately (especially 1801).
- **Electrical outlets** in 1805/1807: There were no counter-level outlets installed in this workspace, nor an outlet at the instructor station. We also need outlet accessible from the seats in 1801/1809 so students can charge devices during lectures.
- **Video Monitor:** In our frequently used anatomy classroom/lab (1830), the large screen, when lowered, covers the entire useful chalkboard. A wide, corner monitor would enable the instructor to display to the screen while using the chalkboard OR displaying a second image to the screen.
- **Reposition the sink on the west side of 1885A:** The depth of the sink is good for washing large glassware, but there is a large (6") expanse of counter to reach over, resulting in terrible ergonomics and a consistently aching back for the staff.
- **Dimmer Switches added to instructor station in labs:** 1840, 1849, 1869, and 1879.
- **Add light switch near the door that opens into 1837:** There is currently only one light switch in the cadaver lab, and it cannot be accessed from the doors into either the ANAT 1 or ANAT 58 anatomy lab. Students have to walk across a dark room, with a potentially slippery floor, to reach the only light switch (which is on the wall backing the hallway).
- **Fix pocket doors into 1850 from all four offices:** None of these doors will open or close easily; there is nothing to grip to open them. Faculty and staff must use their keys as a lever, which ends up bending all their keys.
- **Install dermestid beetle box:** This is required for preparation of vertebrate skeleton specimens, but must be located at a far, safe distance from existing specimens because just one escaped beetle can ravage a collection.

3.1 Academic Quality

The courses in our program are very rigorous. Students must apply and therefore practice foundational skills, time management, and critical thinking in almost all Biology courses. In some courses oral reports are required (communication). In many of our majors courses there are many international students and significant interaction with peers is a routine part of all laboratory courses. Introductory biology and ecology courses provide in-depth instruction in the basis for environmental responsibility. Many students who succeed in the allied health prerequisites state that the most valuable thing they learn is new depths of personal capability – they can succeed beyond anything they thought possible in a very challenging course. It gives them the confidence to pursue their career goals in allied health occupations.

3.2 Student Success and Support

We created a student lounge in Baker Hall for students study, relax, eat, and socialize.

3.3 Responsiveness to Our Community

The Biological Sciences Department has taken several steps to address the diverse community that we serve:

1. We have developed new courses to meet the needs of our student body:

Biology 16 Non-Major's Biology: in order to serve the large number of students who need a GE science with a lab course, we have developed this course. The course teaches the principles of biology through current issues. As a result of this structure the material is more accessible to our students and can be tailored to their particular interests. For example, cell and molecular biology can be taught via the diabetes pandemic, which disproportionately impacts Latino populations.

Biology 7: Careers in STEM: as part of an NSF SSTEM grant that focuses on mentorship, we have developed a career development class. Students start by doing self-assessments of their skills and preferences, move on to exploring career options, learn job search skills such as how to use LinkedIn, write a resume and cover letter and finish with creating a career plan that encompasses their coursework, skills and networking needs to achieve their

long-term goal. This type of information is especially important for first generation college students.

Bio 27 Marine Mammals: to meet the needs of students who prefer, or need, online courses, we have recently developed our first fully online biology course.

3. In addition to language and cultural diversity we are also aware of the economic diversity in our student body. Since most of our students work as well as go to school, they are unable to take the time for an internship. As part of a \$300,000 NSF grant, the department has developed CUREs in BIO 2.3, BIO 10 and MICRO 5. CUREs move that experience into the classroom to increase access to these vital experiences for students' professional development. An additional NSF SSTEM grant specifically provides funds for students with high academic achievement and low financial resources.

4. Biology Club: The club is a venue for building connections and community amongst our students while they develop leadership skills. The club has focused on bringing in speakers to help students learn about career planning, internships and alumni connections. It is important that students maximize the social and cultural capital that they already have as they develop more.

5. The Pre-Allied Health program in the department serves our diverse community in several ways. We offer pre-requisite courses at four levels: ANAT 140 for medical assisting, ANAT 40 for the paramedic program, ANAT 58 & PHYSIO 58 for LVN and Rad tech programs, and ANAT 1, PHYSIO 1, and MICRO 5 for the dental hygiene and nursing programs. Students in all of the Biological Sciences classes are a very culturally diverse group, including many ESL students, veterans, and re-entry students. These courses prepare students for entry into allied health programs. If students get into these programs and successfully complete them, they are ready for well-paying jobs in Sonoma County.

3.4 Campus Climate and Culture

The Biological Sciences Department contributes to this goal by our input to the Baker Hall renovations and the pollination garden on the Petaluma Campus. In addition, we include sustainability principles as part of the curriculum in our biology and ecology courses. One faculty member from our department has organized an event this semester which brings together students and local representatives to address climate change.

3.5 Establish a Culture of Sustainability

The Biological Sciences Department contributes to this goal by our input to the Baker Hall renovations and the pollination garden on the Petaluma Campus. In addition, we include sustainability principles as part of the curriculum in our biology and ecology courses. One faculty member from our department has organized an event this semester which brings together students and local representatives to address climate change.

4.1a Course Student Learning Outcomes Assessment

All of the Department's active and regularly scheduled courses have had most, if not all SLOs assessed. Of the 67 combined SLOs from all courses, 62 were assessed during the prior 6-year cycle. All of the completed assessments have been entered into the college's management system.

Response: Many of the assessments suggest that current course material is appropriate and covered in a way that 70 to 90% of students were able to successfully answer assessment questions. Therefore, few changes were warranted. However, in rare cases where assessment criteria were not met, department dialogue resulted in course improvements for individual instructors.

PLAN: The department has divided the 26 active courses into about 4 per semester for assessment, which means that every course will have all SLOs assessed every 3-4 years.

4.1b Program Student Learning Outcomes Assessment

Program Outcomes have been written and are posted on the web for the two department majors: Biology and Pre-allied Health. The program assessment for both the biology and pre-allied health majors was added to the Sharepoint website in March 2014. The department completed these program assessments using the cumulative assessment approach.

It is important to note that the high pass rate of SRJC students on nursing and dental hygiene board exams reflects very well on the preparation given these students in the department's anatomy, physiology & microbiology courses (the pre-allied health major). Anecdotal information (communication from former students as they complete 4-

year degrees or allied health programs in other schools) supports the success of both our biology major and pre-allied health major programs.

4.1c Student Learning Outcomes Reporting

Type	Name	Student Assessment Implemented	Assessment Results Analyzed	Change Implemented
Course	ANAT 1	Fall 2013	Fall 2013	Fall 2013

4.2b Narrative (Optional)

5.0 Performance Measures

Not Applicable

5.1 Effective Class Schedule: Course Offerings, Times, Locations, and Delivery Modes (annual)

We offer day and evening sections for all Introductory Biology, Anatomy, Microbiology, and Physiology classes. We are offering 1 section of BIO 10 on Saturday in Fall 2023. We offer some sections on Friday. We also use Friday as a day to open our labs to students who need extra study time with lab materials.

We offer our full range of classes on the Santa Rosa Campus. Introductory biology, non-major's biology, human biology, and microbiology are all offered on the Petaluma Campus. Anatomy and Physiology classes are taught solely on the Santa Rosa Campus due to the cost of lab construction and outfitting.

Due to the pandemic, the department has several courses with some level of DE approval. Our lecture only courses BIO 27, Biology of Marine Mammals and BIO 12 Concepts in Ecology, have been offered fully online. Also, a few BIO 10 sections have lectures being delivered online while all labs continue to be in-person only. Note that many nursing and graduate programs will only accept in-person lab courses.

There was tremendous demand for Introductory Biology, Anatomy, Physiology, and Microbiology classes prior to the pandemic. After a slight lull as we returned to normalcy in terms of scheduling, we are once again seeing growth in student demand for these courses. We have increased our section offerings as much as possible given the space constraints and instructor availability. Our goal is to maintain our current offerings of 6-7 sections per semester (plus one of each in summer) of the anatomy, physiology, and microbiology courses required for nursing and dental hygiene. To accommodate as many students as possible the department regularly overenrolls these sections by a few students, due to the predicted attrition experienced in these courses.

FTES in BIO 10 is a good surrogate for overall enrollment trends in the department given that the course serves as a prerequisite for our Biology and Pre-Allied Health major courses and it accounts for about 1/3 of our total enrollment each semester. Considering the 3 terms prior to the pandemic (S19, F19, and S20) the average FTES in BIO 10 was 98.7. We saw this decline only by only 4% during the 20/21 academic year (FTES = 94.8). Enrollment did decline substantially during the 21/22 year (FTES = 78.7), but this was due to a return to in-person instruction and the mandated reduced class size. Encouraging is the return of students to BIO 10 we are seeing this semester (FTEF = 93.2). Given these numbers, we've experienced only a 5.5% drop in enrollment in our most heavily enrolled course compared to pre-pandemic numbers.

5.2a Enrollment Efficiency

Efficiencies across all disciplines for Biological Sciences continue to be outstanding, ranging from 94% to 109% over the last three years (2019-2022). Efficiency numbers on both the Petaluma and Santa Rosa Campuses are usually above 100%. We have seen a drop in efficiency during this current academic year, but this reflects recent enrollment caps imposed by the department as we have returned all our lab courses to in-person.

We achieve these results by over-enrolling our sections because we know that not every student can complete these challenging classes. We haven't overenrolled during the past few semesters due to the gradual relaxing of social distancing recommendations. We also teach many laboratory courses as a "double-section" teaching twice as many students in lecture as in lab.

5.2b Average Class Size

Class size for most of our courses is dictated by lab size which is 24 (28 for physiology). Any numbers above 24 reflect overfilling of classes by dedicated instructors. Scanning the numbers shows that our classes usually have 23-26 students per class with the lowest numbers in sections scheduled on the Petaluma campus.

5.3 Instructional Productivity

Although the department's FTEF/FTES ratio suggests a decline in productivity, these numbers are misleading given that, for several terms, enrollment was capped at 50% for all but a few of our sections due to social distancing requirements. For the most recent semester (F22) FTES/FTEF = 11.25. Although not back to pre-pandemic numbers, this does indicate substantial improvement compared to the most recent academic year (F21 = 8.4 and S22= 8.7).

5.4 Curriculum Currency

All of our courses have current CORs and we have initiated a regular cycle of 5-year review for all courses.

5.5 Successful Program Completion

To minimize barriers to successful completion we coordinate scheduling of the Biology Major's courses with the Chemistry and Physics departments. We offer the first course in our major's sequence, BIO 2.1, in the summer (when possible) as well as Fall and Spring to allow students to complete all three courses required for the biology major

within one year. We also have prepared rotation plans that show students how to complete our majors within two years.

Biology AS

2019/2020: 14

2020/2021: 11

2021/2022: 10

Biology AS-T

2019/2020: 0

2020/2021: 4

2021/2022: 12

While these numbers are relatively low, the primary reason that an AS in biology serves no academic purpose other than noting achievement and completion. Few students apply for this degree because they want the BA/BS in biology, which is usually considered a minimum requirement for acquiring a job in this field. Furthermore, most students do not want to complete the LIR course in addition to the already high unit demand of this major, and often transfer before completing all of the AS requirements. However, the increase in degrees awarded clearly shows that students are beginning to see the value of marking this level of achievement.

A performance measure missing from this analysis is the number of students who transfer to 4-year institutions as biology majors. We are hopeful these data will become available in the future as it is a better indicator of our success in preparing students for a biology career than the number of students who earn an AA or AS.

Pre-allied Health Degrees Awarded:

2015/16: 59

2016/17: 87

2017/18: 86

2018/19: 43

2019/2020: 108

2020/2021: 79 (includes 1 Physiology AS)

2021/2022: 110

These numbers have increased since the last PRPP and are impressive given that most students in this major are taking pre-requisite courses for nursing or dental hygiene, and they usually get their AA degree in these disciplines. The increase in these numbers may mean that students are increasingly aware of some value to the AA degree even in the pre-requisite discipline.

5.6 Student Success

Retention

Retention rates for the college ranged from 72.2% to 83.47%. Retention rates for all Biological Sciences disciplines on both campuses ranged from 76.3 to 92.2%. Thus, our retention rate equals or exceeds that of the district. These are noteworthy retention rates since many of these courses are notoriously difficult for students. There is a consistent pattern of higher retention in the summer, as is true for the college as a whole.

There are a few retention rates below 70% - for 3/6 botany sections; and the last 4/6 semesters in anatomy. Anatomy includes ANAT 140 which enrolls many extremely underprepared students and therefore has a high attrition rate. In addition, Anatomy 1 is usually the first in a series of very challenging prerequisite courses for the pre-allied health students. Students are often unprepared for the demands of this course. However, the subsequent courses, Physiology and Microbiology, have higher retention rates, thanks in part to the preparation they received by eventually succeeding in Anatomy.

Successful Course Completion

The range for the college is 68.10% to 80.96 %. The Biological Sciences data for all disciplines is 70.2% to 88.7%. Successful completion rates among the subdisciplines mirrors retention rates.

GPA

The district data range from 2.75 to 3.051; Biological Sciences overall data range is 2.54 - 2.88. This lower value is consistent with the STEM cluster in general, which makes sense given that STEM classes are typically very demanding.

Equity Data:

No clear pattern of increasing or decreasing success is seen for any particular sub-group. Comparisons between groups is not meaningful given the differences in sample size.

The department feels it can contribute to retention and successful completion. Interventions currently in place to help students succeed include:

- * faculty focus on pedagogy practices including embedding research and study skills into our courses
- * offering a developmental course to help students with bio 10 (bio 100)
- * an educational campaign to alert students to preparation needed for Anat 1 and Physio 1 and MICRO 5 (web site info & memos to counselors)
- * the use of CSKLS tutors and peer tutors in labs
- * open lab time on Fridays to increase student access to study materials

5.7 Student Access

The number of Hispanic students continues to rise steadily in all biological sciences subdisciplines. For example, in Anatomy, the proportion of Hispanic students rose from 31.8% to 42.3% over the last three years, exceeding the percentage of white students for the first time. In all of our subdisciplines the proportion of white students is slowly declining as the Hispanic proportion increases. There is no clear pattern of increase or decrease for any other ethnic group.

It is interesting to note that the number of students who choose, "decline to state" has dramatically increased in the last three years. For example, in 2015/16 only 0.7% of Anatomy students declined to state their ethnicity, in 2018/19 that number is 5.2%.

There are significantly more females than males in all of our subdisciplines with the exception of Botany, where the ratio is close to 50/50. In Anatomy, Biology, Microbiology, and Physiology, 16 – 32% of our students are male. This is not surprising given that many of our students are entering allied health fields, which traditionally have been dominated by women. Given that the number of nurses who are men in this country is only ~10%, our enrollment of 16-32% males shows some progress in this area. Outreach by the allied health departments to male students may be useful to increase these numbers. Our department outreach for this program is primarily allowing several high school classes to visit the anatomy lab every semester.

The Biological Sciences department offers two courses at the 100 level to serve students who might have language and/or socioeconomic challenges: ANAT 140 and BIO 100.

5.8 Curriculum Offered Within Reasonable Time Frame

All of the department's core courses are taught every semester, high demand courses are taught in multiple sections and differing day/time slots, when possible. A few courses with lower demand (BOTANY 10 & 60) are taught in alternate semesters. BIO 13 is alternated each semester between the SR and Pet campuses.

5.9a Curriculum Responsiveness

Most of our curriculum is standard, and the same courses have been needed, required, and taught for the past 50 years.

Our curriculum is current and in compliance with UC/CSU requirements. Our curriculum provides the essential pre-requisites for all of the allied health programs. BIO 10 is required for many GE students. To a minor extent we also support environmental and agriculture students.

We recently added a new course, BIO 16 Non-Majors Biology. This course is designed for non-biology majors and emphasizes the core concepts of biology linked to current issues. It is a more engaging course for non-majors, and one that will prepare them to be better informed citizens with respect to science, the environment and sustainability.

5.9b Alignment with High Schools (Tech-Prep ONLY)

NA

5.10 Alignment with Transfer Institutions (Transfer Majors ONLY)

Our biology major curriculum is aligned with CSU and UC major programs. The core topics taught in the first two years of a 4-year biology major include: cell biology, botany, ecology, zoology, evolution. These topics can be arranged in different ways in different transfer institutions. Some pair botany with ecology and zoology with evolution (as we do at SRJC) and some teach organismal biology (botany with zoology) and ecology with evolution.

5.11a Labor Market Demand (Occupational Programs ONLY)

NA

5.11b Academic Standards

The department monitors and discusses academic standards on a regular basis, through the evaluation process and curriculum updates. Faculty for each of the courses with multiple sections meet every year to discuss the course. Student Learning Outcome assessments are performed on a regular basis, and the results are used to maintain our high academic standards.

6.1 Progress and Accomplishments Since Last Program/Unit Review

Rank	Location	SP	M	Goal	Objective	Time Frame	Progress to Date
0001	ALL	04	03	climate change assessment	evaluate the department's energy and resource use and promote sustainable landscape use.	2 years	Ongoing - this conversation has expanded to include the interest in a Campus Biodiversity Initiative. Biology faculty and students are integral to events including Climate Action Night and Green Living Fair.
0002	Santa Rosa	08	01	Examine support staff allocation: key staff are retiring and this gives us an opportunity to reexamine how we allocate staff; which classes need what type of support. Address the lack of support for night classes.	Ensure adequate support for all of our courses	1 year	Filling the AA position has helped tremendously. We also hired a lab coordinator and are in the process of hiring a temporary, FT SLIA for Physiology.
0003	ALL	02	01	STEM visioning and integration across disciplines and campuses	Stay active in the planning process for the 2nd phase of the STEM cluster building in coordination with other STEM departments. Participate in the design of the new pollinator garden on the Petaluma Campus.	ongoing	This is an ongoing goal that is tied to planning of the outdoor spaces between Baker, Lark, and the new STEM building. We'd like to discuss possible collaboration around art, geology, anthropology, Ag (demo garden?), etc. We would also like to update and use the courtyard in the Lark Greenhouse for native plant propagation.
0004	Santa Rosa	03	05	continue K-12 outreach	encourage K-12 students to enter STEM disciplines	ongoing	The BioClub has been active in outreach with local schools and participating in local science fairs (ex. Bay Area Discovery).
0005	ALL	01	01	increase support for career development	expand internship program (funding and opportunities)	ongoing	Ongoing - we are discussing the formation of a department subgroup responsible for pursuing these objectives.
0006	ALL	03	01	DEIA	establish regular conversations about how we in Biological Sciences can create a more equitable and inclusive environment	ongoing	Ongoing - curriculum work and facilities use are informed by these conversations. Ex. student lounge and study spaces
0007	Santa Rosa	01	01	foster critical thinking in students, across disciplines	Develop a critical thinking course in collaboration with the Philosophy Department	2 years	We require grant funding to develop this course.

6.2b PRPP Editor Feedback - Optional

Summarizes well the Biological Sciences Departments' needs, efforts towards student success, and contributions to the District.

6.3a Annual Unit Plan

Rank	Location	SP	M	Goal	Objective	Time Frame	Resources Required
0001	ALL	04	08	Spearhead a Campus Biodiversity Initiative. This will include utilizing the SRJC campus as a “living lab” to promote sustainability practices and associated curriculum and student research.	Partner with local groups (ex. California Native Plant Society) to advance this work. Increase community awareness of this work and its importance via outreach and communication (social media and college/department website). Develop course-based projects and student research opportunities. Evaluate the department's energy and resource use and promote sustainable landscape use.	2 years	District funding for a sustainability coordinator, and student intern focusing on biodiversity/sustainability, funding for campus/landscape improvements and community awareness, district support to help with outreach and communication (PR, social media, etc.)
0002	ALL	01	01	Increase support for student internships and career development	Increase awareness of the existing student internship work via social media and college/department website. Work with the district's PR group and the Foundation to appeal to potential donors in hopes of acquiring sustaining financial support. Expand resources and events related to careers/opportunities in biology.	ongoing	Support from the district's marketing and PR groups and the SRJC Foundation to highlight the positive impacts of our existing student internship programs. The goal is to obtain new, sustained donations.
0003	ALL	02	01	STEM visioning and integration across disciplines and campuses	Stay active in the planning process for the 2nd phase of the STEM cluster building in coordination with other STEM departments. Participate in the design of the new pollinator garden on the Petaluma Campus.	ongoing	This is an ongoing goal that is tied to planning of the outdoor spaces between Baker, Lark, and the new STEM building. We would like to update and use the courtyard in the Lark Greenhouse for native plant propagation. We'd like to discuss possible collaboration around art, geology, anthropology, Ag (demo garden?), etc.
0004	Santa Rosa	01	01	Bring our course offerings in line with our budgetary and staff support from the college.	Ensure adequate support (staff and supplies) for all of our courses, including night sections.	1 year	Replacing staff is ongoing. We still haven't addressed the need for a MICRO SLIA, especially to support our night section. Our supplies and maintenance budget needs to be increased to meet the demand. We receive insufficient resources to maintain our current number of sections. Reducing high enrolled sections such as ANAT and MICRO may be necessary.
0005	ALL	03	01	DEIA	establish regular conversations about how we in Biological Sciences can create a more equitable and inclusive environment	ongoing	

Rank	Location	SP	M	Goal	Objective	Time Frame	Resources Required
0006	Santa Rosa	03	05	continue K-12 outreach	encourage K-12 students to enter STEM disciplines	ongoing	We plan to continue what we're already doing, especially supporting the Bio Club (see Section 6.1). Additionally, we will continue to participate in the SWAP program as part of the HSI STEM grant. Ongoing funding for these programs is essential.
0007	Santa Rosa	01	01	foster critical thinking in students, across disciplines	Develop a critical thinking course in collaboration with the Philosophy Department	2 years	We require grant funding to develop this course.
